

LECTURE & BOOK SIGNING:

Metrics for Latino Wellness Management in an Increasingly Racially Ambiguous Population

DAVID E. HAYES-BAUTISTA

Distinguished Professor of
Medicine and Director of the
Center for the Study of Latino
Health & Culture, UCLA

ABSTRACT

Social determinants of health are increasingly used as a substitute for racial/ethnic categories commonly used to track health disparities in the United States. With a focus on Latino health outcomes, this presentation will provide a conceptual framework for how to think about and measure health disparities. Racial/ethnic categories have a very limited future in California. While it is estimated that less than 3% of the U.S. population is racially ambiguous, in California nearly 41% of the 2010 birth cohort (nearly 500,000 babies) is so racially ambiguous as to threaten the internal validity of measures used to predict future health disparities based on race/ethnicity.

Friday, February 17th
Highlander Union Building 355
4:00 to 5:30 p.m.

Free and open to
the public.
Seating is limited.
